

SHIVANSHI SHRIVASTAVA

SOFTWARE ENGINEER | DATA ENGINEER

Pune, India | shivanshishrivastava1@gmail.com | 7477078585

PROFESSIONAL SUMMARY

Software/Data Engineer with experience in software engineering, application-oriented development, CI/CD automation, cloud infrastructure, data platforms, and Python/SQL development. Experienced in designing and building scalable data applications and pipelines, working with distributed and multi-tier AWS/Databricks environments, relational and NoSQL databases, and infrastructure-as-code. Strong foundation in object-oriented programming, algorithms, Agile delivery, version control, deployment automation, and operational documentation.

- Experience in distributed (multi-tiered) systems, algorithms, and relational databases through scalable cloud data applications, Python/SQL development, and data-layer engineering.

CORE QUALIFICATIONS

- Distributed & Multi-Tier Systems: AWS/Databricks platforms, scalable batch and real-time data solutions, data lake and warehouse architectures
- Programming & OOD: Python, Java, C++, Scala, SQL; object-oriented programming and reusable application components
- Databases: Relational databases including Amazon Redshift and Aurora; NoSQL including DynamoDB; data modeling and data-layer development
- Software Engineering: Application design, development, CI/CD, version control, infrastructure automation, deployment, monitoring, and maintenance
- Algorithms & Data Processing: Python/SQL data processing, ETL, Spark/PySpark, feature engineering, scalable data transformations
- Agile Practices: Iterative delivery, collaboration, version-controlled development, workflow automation, and production support
- Automation & Documentation: CI/CD automation, reusable deployment templates, Infrastructure as Code, pipeline standardization, monitoring, and operational documentation

WORK EXPERIENCE

Data Engineer I | Mastercard | Pune | 06/2025 – Present

- Experience in application design, software development, and automated testing using Python, SQL, Java, Scala, and C++, with automated CI/CD validation and deployment workflows.
- Enhanced CI/CD pipelines for Databricks applications and data workflows, automating deployment processes and improving consistency through version-controlled assets.
- Implemented Infrastructure as Code with Terraform for Databricks workspaces and AWS cloud infrastructure, enabling repeatable and maintainable environment provisioning.
- Provisioned and configured AWS resources including VPCs, IAM roles, and S3 through infrastructure-as-code manifests, supporting secure multi-tier cloud application environments.
- Configured secure AWS S3 integrations and IAM-based access for Databricks workloads, applying cloud security and access-control practices.
- Developed a reusable Databricks Asset Bundle (DAB) template and standardized CI/CD workflow for scalable deployment of workflows and Delta Live Tables pipelines.
- Built and maintained batch and real-time data solutions using Databricks and AWS services, supporting data warehouse and data lake applications.
- Worked with Amazon Redshift, Aurora, and DynamoDB to create data layers and support data migration using AWS Database Migration Service.
- Developed data engineering solutions using Python, SQL, PySpark, and Scala, applying software engineering and distributed data-processing concepts.
- Used Apache Airflow and dbt for workflow orchestration, transformation, scheduling, and maintainable data application development.
- Managed cloud data services with emphasis on reliable scheduling, monitoring, deployment, and ongoing operation of assigned applications and workflows.

PROJECT

House Price Prediction Machine Learning Project | 12/2023

- Built and trained Linear Regression and Random Forest models using Python, pandas, and scikit-learn.
- Processed real-estate data through data cleaning and feature engineering, demonstrating structured application development and analytical problem solving.

TECHNICAL SKILLS

Programming: Python, SQL, Java, C++, Scala

Software Engineering: Object-Oriented Programming, Application Development, CI/CD, Git, Version Control, Automation

Cloud & Platforms: AWS, Databricks, S3, IAM, VPC, EMR, Lambda

Databases: Amazon Redshift, Aurora, DynamoDB

Distributed Processing: Apache Spark, PySpark, Kafka

Data Engineering: ETL Pipelines, Batch Processing, Real-Time Processing, Data Warehousing, Data Lakes, dbt

DevOps & IaC: Terraform, Ansible, AWS CloudFormation, Docker, Kubernetes, Jenkins, GitHub Actions, GitLab

Orchestration & Operations: Apache Airflow, Monitoring & Logging

Web: JavaScript, HTML/CSS, React, Node.js

EDUCATION

Bachelor of Engineering (B.E.) in Information Technology | Institute of Engineering and Technology, Devi Ahilya Vishwavidyalaya, Pune

11/2021 – 05/2025 | CGPA: 8.74

Class 12th – Holy Cross Ashram School, Datia | 87.5%

CERTIFICATION

- Microsoft Azure Essentials – LinkedIn Learning
